Subject: FW: Request for OGWDW Review of Class III uranium ISR Documents for Dewey Burdock

Sorry to bug you about this again, but I could not remember if you had decided to send these documents on to Ron or if you would prefer I do.

Subject: Request for OGWDW Review of Class III uranium ISR Documents for Dewey Burdock

Sadie: here is what I have drafted for your email to Ron. I will send the fact sheet in second email (due to size restrictions).

Ron: per my earlier voicemail message, I am requesting OGWDW's review of the attached Class III area permit, associated aquifer exemption, and fact sheet documentation for Powertech's proposed uranium ISR Dewey Burdock project in South Dakota. These documents have undergone extensive technical and legal review within Region 8. However, since this would be EPA's first proposed issuance of a Class III permit for uranium ISR nation-wide, we want to ensure that OGWDW has the opportunity to identify any nationally-significant issues or concerns. We are hoping any such issues/concerns can be discussed when we brief you directly on Tuesday morning, December 9th, prior to the OW Review here in Denver. Also, while the Class V area permit documentation for proposed deep well disposal of uranium ISR wastes is modeled on past Class I non-ISR permits we have issued, we would be happy to provide OGWDW these documents as well.

Because of the size of the fact sheet (which explains the basis for the proposed Class III area permit conditions) is exceptionally large, I will be sending that to you in a second email.

Please feel free to contact us with any questions, etc.
